Norway

Outline

- **Basic Economic Elements of Land-Based RAS**
  - Capital Expense (CAPEX)
  - Operating Expense (OPEX)
  - Working Capital
- **Comparison of Land-Based RAS and Net-Pen Salmon Production Models**
  - Capital Expense
  - Biological Production Model
  - Production Cost
  - Cash Flow
  - Net Present Value

Capital Expenses for Land-Based RAS (CAPEX)

- **Land**
- **Rearing Tanks**
- **Buildings**
- **RAS Equipment Package**
- **Water Supply System**
- **Feeding System**
- **Backup Generator System**
- **Monitoring and Control System**
- **Effluent Treatment/Solids Management**
- **Processing Facility**
Operating Expenses for Land-Based RAS (OPEX)

US $ per kg salmon produced (HOG)

Legend:
- Feed
- Electric
- Oxygen
- Labor
- Management
- Processing
- Depr & Maint
- Eggs
- Bicarb

Pie chart values:
- $1.96 — 49% (Feed)
- $0.59 — 15% (Depr & Maint)
- $0.48 — 12% (Labor)
- $0.33 — 8% (Electric)
- $0.16 — 4% (Oxygen)
- $0.15 — 4% (Management)
- $0.12 — 3% (Eggs)
- $0.11 — 3% (Processing)
- $0.09 — 2% (Bicarb)

Working Capital Requirement

- **The business requires enough upfront cash reserve to cover the expenses throughout the initial production cycle until the first harvest generates sales revenue**
  - Atlantic Salmon – 24 months
  - Rainbow Trout/Steelhead – 12 months
  - Tilapia – 6 months

Economic Comparison of Two Production Models

Illustration: B. Stenberg

Land-based RAS farm

Producing 3,300 M.tons HOG Atlantic Salmon

Model Net Pen farm

Producing 3,300 M.tons HOG Atlantic Salmon

THE CONSERVATION FUND
## Model Land-based RAS farm (32 million US $)

One production site

Invested equipment:

- 40,000 m^3 of rearing tank volume
- 25,500 m^2 of building area
- 2,500 m^2 processing facility
- 885 m^3/min of pumped RAS flow
  - Pumps and Piping
  - Screen filters
  - Biofilters
  - Gas Conditioning Filters
- 1.08 – 1.26 kg feed per m^3 supply water
- Feeding Systems
- Backup Generators

Investments in total: 32 M US $ - approximately 192 MNOK

Maintenance and reinvestments set equal to the depreciations
Model Net Pen farm (12.3 million US $):

Two production sites, each with six net pen cages.

- ≈587,000 m^3 net-volume
- 120,000 m^2 area footprint visible at sea
  - ≈179,000 m^2 area footprint incl. no thoroughfare zone
  - ≈463,000 m^2 area footprint incl. no fishing zone

Invested equipment:

- 3 licences
- 12 Floating rings (157m Ø)
- 24 nets (25 m deep)
- 2 mooring systems
- 2 boats
- 2 feed barges (150 Mtons)
- 12 camera systems
- 12 feed distributors
- 12 power systems

Investments in total: 72.9 MNOK – approximately 12.3 M US $

Maintenance and reinvestments set equal to the depreciations
Model Land-based RAS farm

- One production site for all life-stages
- Four cohorts per year

- Growth based on thermal growth coefficients from Freshwater Institute growout trials, adjusted down by 10%:
  - 1.1 for Fry
  - 1.25 for Smolt
  - 1.8 for Pre-growout
  - 2.2 for Growout

- Mortality per generation 16%

- Feed conversion ratios:
  - 0.75 for Fry
  - 0.90 for Smolt
  - 1.0 for Pre-Growout
  - 1.1 for Growout
- Overall Feed to Whole Fish Produced (kg/kg): 1.09
Model Net Pen farm:

- 2 production sites & 3 licences of 780 M.tons of maximum total biomass at sea.
- Two transfers of smolts to sea annually, to one site
  - S1 at 1st of April, 100 grams, 520' smolts in three cages
  - S0 at 1st of August, 75 grams, 520' smolts in three cages

- Growth based on the Skretting table, Specific Growth Rate (SGR), adjusted down by 12 %.

- Mortality per generation approximately 16.1 % (average in Mid-Norway in 2011) (Norwegian Food Safety Authority 2011).

- Economic feed conversion ratio: 1.27 (average in Norway over the last ten years) (Directorate of Fisheries 2013).
Model Land-based RAS farm

- Rearing Density
    - 80 kg/m^3 maximum
- Harvesting:
    - Time from first feeding to first harvest: 21 months
    - Harvest every week of the year
        - Each cohort harvested over 13 weeks
        - One grisle harvest at ~1.2 kg for 50% of males
    - Harvest in total: 3,947 M.tons LWE; 3,300 M.tons HOG (5 % purge loss / 12 % HOG loss)
    - Initial harvest weight (whole fish): 4.5 kg
    - Average harvest weight (whole fish): 5.1 kg

- No downtime in the bioplan

Model Net Pen farm:

- Rearing Density
    - 25 kg/m^3 maximum
- Harvesting:
    - Time from first feeding to first harvest: 24–31 months
    - Time at sea before first harvest: 16 months
    - Harvest 8 months of the year
        - Harvest S1 from July to October
        - Harvest S0 from November to February
    - Harvest in total: 3,975 M.tons LWE; 3,299 M.tons HOG (5 % purge loss /12 % HOG loss)
    - Average harvest weight (whole fish) : 4.5 kg
- Two months of fallowing between production cycles

4,24 USD

Model Land-based RAS farm

Pie chart legend:
- Feed — $1.96 / 49%
- Electric — $0.33 / 8%
- Oxygen — $0.16 / 4%
- Labor — $0.48 / 12%
- Management — $0.15 / 4%
- Processing — $0.11 / 3%
- Depr & Maint — $0.59 / 15%
- Eggs — $0.12 / 3%
- Bicarb — $0.09 / 2%
Total estimated production cost per kilo HOG: 3.98 US $

– Uses 0.05 US $ / kWh;
  Comparative Norway is 0.17 US $ / kWh

Model Net pen farm

Pie chart legend:
- Feed cost — $2.22 / 52%
- Smolt cost — $ 0.48 / 11%
- Insurance cost — $ 0.03 / 1%
- Salary — $0,22 / 5%
- Well boat cost — $0,15 / 4%
- Other operating cost — $0,42 / 10%
- Depreciations — $0,34 / 8%
- Cost of primary processing — $0,38 / 9%
Total estimated production cost per kilo HOG: 4.24 US $

13

Comments: EFCR, mortality & utilization: Model Net Pen Farm

- Not a optimal utilization of three licences!
  - It's possible to harvest as much as 1,600 – 1,700 M.tons per licence (~2 x Model)
    - Requires a more large-scale operation

- Average EFCR used in the calculation is high: 1.27
  - It's possible to achieve an EFCR more closely to 1.00
    - Top 25 % EFCR in Norway over the last ten years is 1.14
    - Top 10 % EFCR in Norway over the last ten years is 1.04

- Average mortality at 16.1 % is high
  - Some sites in Norway are now achieving only 2 – 4 % mortality
  - Then on the other side, some sites have mortality at over 30 % - mostly due to disease.

Use of "best-practice" inputs

- EFCR: 1.14
- Mortality: 8 % per generation

- Gives a production cost of <u>4 US $/kg HOG</u> (Compared to 4.24 US $/kg)
  - Reduction in feed cost
  - Reduction in smolt cost

- Model Net Pen Yield per smolt: <u>3.44 kg</u>
  - Model Net Pen Base Case: <u>3.17 kg</u>
- Model RAS Yield Per Smolt: <u>3.97 kg HOG</u>

4 US$/Kg

Pie chart values:
- $0,42 — 11%
- $0,33 — 8%
- $0,38 — 10%
- $2,03 — 51%
- $0,44 — 11%
- $0,3 — 1%
- $0,22 — 6%
- $0,15 — 4%

Legend:
- Feed cost
- Smolt cost
- Insurance cost
- Salary
- Well boat cost
- Other operating cost
- Depreciations
- Cost of primary processing

THE CONSERVATION FUND
- Initial test marketing in the Vancouver area and in the Washington DC area indicated that product sold at premium pricing (30% or more).
  - Basis of premium was different in different markets – sustainable (BC) and local (DC)
- Land-based RAS produced salmon is a premium product that is being sold into an incremental market that currently doesn't buy net pen salmon (Kuterra data).
- Most major retailers have sustainable seafood purchasing policies that land-based RAS produced salmon will be able to meet.

THE CONSERVATION FUND
Model Land-based RAS farm – w/o Premium Price:

Investments:
- Investments in total: 32 M US $

Income:
- Price per kilo 34 NOK or 5.66 US $

- Total estimated income: **18.68 M US $**

Costs:
- Production cost excluding financial cost: 3.98 US $ / kg
- Total production costs (ex. finance): ≈ **13.13 M US $**

Earnings before Interest and Taxes (EBIT): 5.55 M US $

Model Net Pen farm – Conservative Performance:

Investments:
- Investments in total: 12.3 M US $

Income:
- Fish Pool forward prices
    - 2014: 35.85 NOK/kilo
    - 2015: 33.88 NOK/kilo (Jan - Aug)
- Estimated price pr kilo: 34 NOK ≈ 5,66 US $

- Total estimated income: **18.67 M US $**

Costs:
- Production cost excluding financial cost: 4.24 US $ / kg
- Total production costs (ex. finance): ≈**13.99 M US $**

Earnings before Interest and Taxes (EBIT): 4.68 M US $

THE CONSERVATION FUND

Model Land-based RAS farm – Premium Price:

Investments:

- Investments in total: 32 M US $

Income:

- Possibility for a 30% price premium
    - Price per kilo (5.66 * 1.3) ≈ 7.36 US $

- Total estimated income: **24.29 M US $**

Costs:

- Production cost excluding financial cost: 3.98 US $/kg
- Total production costs (ex. finance): ≈ **13.13 M US $**

Earnings before Interest and Taxes (EBIT): 11.16 M US $

Model Net Pen farm – High Performance:

Investments:

- Investments in total: 12.3 M US $
Income:

- Fish Pool forward prices
    - 2014: 35.85 NOK/kilo
    - 2015: 33.88 NOK/kilo (Jan - Aug)
- Estimated price per kilo: 34 NOK ≈ 5.66 US $

- Total estimated income: **18.67 M US $**

Costs:

- Production cost excluding financial cost: 4.00 US $/kg
- Total production costs (ex. finance): ≈ **13.20 M US $**

Earnings before Interest and Taxes (EBIT): 5.47 M US $

THE CONSERVATION FUND

Model Land-based RAS farm

- Salary: ≈ 1,575,000 US $ / year
- Electricity: ≈ 21.5 mWh
  - Cost per kWh: 0.05 US $
- Oxygen: ≈ 3,000 M.tons
  - Cost per kilo: 0.2 US $
- Bicarb: ≈ 862 M.tons.
  - Cost per kilo: 0.35 US $
- Feed: 1.50 US $ per kilo
- Eggs: ≈ 1.2 million
  - Cost: 0.30 US $ each
- Management: 500,000 US $ / year
- Primary processing:
  - Salary: 375,000 US $ / year
    - 10 persons
    - Other cost included in the total calculation
- Price per kilo HOG: 5.45 – 8.77 US $

Model Net Pen farm

- Salary: ≈ 750,000 US $ / year
- Primary processing ≈ 0.38 US $ / kilo HOG
- Well boat 0.92 US $ / kilo HOG (includes smolt and slaughter transport)
- Insurance premium ≈ 0.8 % of the value of the biomass
- Feed: 1.48 US $ per kilo
- Smolts: Conservative performance 1030'/year
  - High performance: 960'/year
  - Cost: ≈ 1.53 US $ each
- Other production cost (Ex. Electricity, de-liceing etc.) ≈ 0.43 US $ / kilo HOG
- Price per kilo HOG: 5.45 – 6.75 US $

- Licences not depreciated and is sold after 10 years

Both:
2 % inflation first 6 years; 3 % inflation four last years
Value of equipment/buildings etc. set to 0 after ten years

Cash flow (in 1000 $)

Legend:
- Model Land-based RAS fish farm
- Model Land-based RAS fish farm with premium price
- Model Net Pen farm - Conservative performance
- Model Net Pen farm - High performance

Net Present Value Analysis

- Rate of return calculated to 8.91 %. (6 % loan interest, 28 % tax, 27.23 % required return on equity before tax, 30/70 private equity/loan)

Risk free return	3.23 %
Commercial risk	10 %
Financial risk	10 %
Liquidity premium	4 %
Required rate of return before tax	27.23 %
Tax (28%)	7.63 %
Estimated required rate of return on equity	19.61 %
Estimated required rate of return on total capital	8.91 %

Net present value at 8.91 % required rate of return

Model Land-based RAS farm:

- NPV: -16 M US $
- NPV & NO Required Rate of Return: 1,810,000 US $

NPV is for 10 years

Model Land-based RAS farm with premium price

- NPV: 13.33 M US $
- NPV at 0, at a required rate of return of: **≈ 14.35 %**

Model Net Pen farm - Conservative performance

- NPV: 7 M US $
- NPV at 0, at a required rate of return of: **≈ 15.07 %**

Model Net Pen farm - High performance

- NPV: 11.39 M US $
- NPV at 0, at a required rate of return of: **≈ 18.67 %**

Net present value at 8.91 % required rate of return

Model Land-based RAS farm:

- NPV: -16 M US $
- NPV & NO Required Rate of Return: 1,810,000 US $

NPV is for 10 years

Model Land-based RAS farm - Premium Price

- NPV: 13.33 M US $
- NPV at 0, at a required rate of return of: ≈ **14.35 %**

Model Net Pen farm - Conservative Performance

- NPV: 7 M US $
- NPV at 0, at a required rate of return of: ≈ **15.07 %**

Model Net Pen farm - High performance

- NPV: 11.39 M US $
- NPV at 0, at a required rate of return of: ≈ **18.67 %**

Brief Conclusions

- Production: Model Land-based RAS farm has a more consistent production than the Model Net Pen farm

- CAPEX: Model Land-based RAS farm capital cost is greater per unit of annual production than Model Net Pen capital cost per unit of annual production

- OPEX: Model Land-based RAS farm operating cost is slightly lower than Model Net Pen farm operating cost (within this analysis)

- NPV: Model Land-based RAS farm and Model Net Pen farm have similar net present value for the expected case
